/xerographic

An experimental* theme for the Hugo static site generator. See heracl.es for a live preview, and the theme's Git resporiry /xerographic for more details.

- Major breaking changes may occur between versions, both in functionality and design approach. Using versioned releases is more than encouraged.

Installation

The following instructions assume that you already have your site's content in a Git repository. You may move the provided `.bat` scripts (for Windows 10) in your root directory to easily update to newer versions.

As a submodule

The official Hugo documentation for themes suggest to install as a *submodule*:

```
cd themes
git submodule add https://github.com/Arty2/xerographic
```

To update the theme to the most current version:

```
cd themes/xerographic
git checkout master
git pull
cd ../../
```

As a subtree

Installing as a *subtree* has several advantages if you wish to actively contribute with pull-requests:

```
git remote add xerographic https://github.com/Arty2/xerographic.git
git subtree add --prefix=themes/xerographic xerographic master --squash
```

To update the theme to the most current version:

```
git subtree pull --prefix=themes/xerographic xerographic master --squash
```

Features

- Plug & Play; should work with zero configuration.
- Multilingual ready.
- Fully responsive. Two fluid breakpoints.
- Themable. Automatic light and dark themes respective to user settings.
- Sidenotes (marginalia) inspired by Tufte CSS. Collapsible on mobile.
- Inline comments and external links preview when `title=""` is provided.
- Detailed & extensible page and post metadata. Automatic Table of Contents for lengthy posts.
- Page and post types: normal; preformatted.

Built-in Shortcodes

- articles-list
- articles-filter
- gallery
- img
- marginalia
- menu-social
- section

Customisation

Favicon

Add a `/static/favicon.png` file.

CSS Variables

…

Custom CSS

This theme supports per page custom styles via `custom.css` in the page's bundle or folder. Global styles may be customized by creating a `/static/styles/custom.css` file.

Custom JavaScript

`./script.js ...`

Site configuration

See `config.default.yml`

`...`

Post and page frontmatter options

Automatic featured images, by name `*__featured.ext`

```
title
summary
tags
draft
featured_image
show_comments
show_meta
license
rating
dateread
datecreated
crosspost
publication.title
```

Bundled webfonts

Bundled / Credits

- jQuery (to be phased out)
- simple-lightbox
